

Group #4

Iteration #3

Description of the program (minor release 2)

The main issue from the last iteration was the changing display options. This issue is now fixed and you can change the theme of the game to your desired color set by clicking on the menu, and choosing display options and choosing your preferred color. Players are no able to make a bid or update their bid with in a specific amount of time (60 seconds). This task can be done by clicking on the “bid” button to the right side of the players’ names and number of target chips gained. Players are now able to make a move (if the move is legal) based on the bid made. If the move is successful and the player reached the target chip, the number of their target chip is going to be increased.
